

# THIN CEILING SYSTEM

## Key Benefits

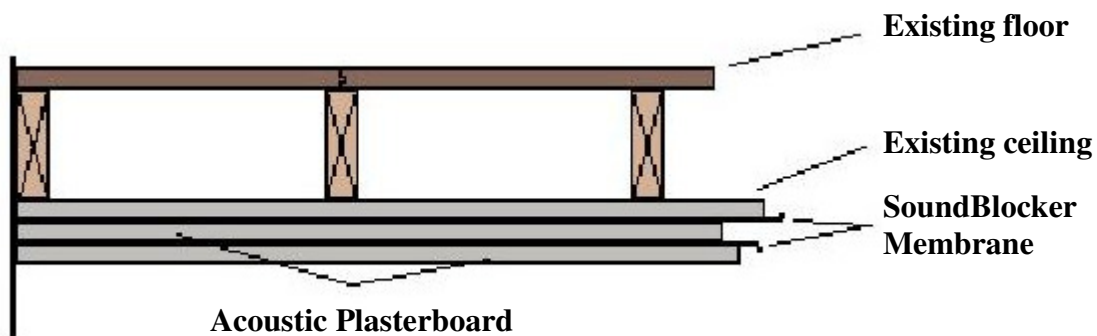

- A complete system that significantly reduces noise through a floor.
- Blocks out airborne sound as good as lead
- Minimum loss of ceiling space (Less than 3.5 inches)
- Easy and clean to install.
- Available from stock

## Description

The Thin Ceiling System is designed to reduce the amount of airborne noise which penetrates poorly insulated floors. This system is unlikely to reduce much footfall or impact sound that is made on the floor above, if this is the problem please see our Studio Ceiling System.

The main product is the innovative product, SoundBlocker Membrane at only 2Kg/ m<sup>2</sup> it's easy to handle and carry enabling work on soundproofing a ceiling to be carried out by a single person. The roll is simple to work with making for a quick, easy, home improvement product.

Two layers of Membrane are sandwiched between two layers of our Acoustic Plasterboard as shown below.

| Your area<br>in m <sup>2</sup> | 15mm Acoustic Plasterboard<br>(Based on 2 layers) | Sound-<br>Blocker<br>Membrane | Acoustic<br>Sealant | Special Spray<br>Adhesive |
|--------------------------------|---|-------------------------------|---------------------|---------------------------|
| 1                              | 1   | 1                             | 1                   | 1                         |
| 2                              | 2   | 1                             | 1                   | 1                         |
| 3                              | 3   | 1                             | 1                   | 2                         |
| 4                              | 3   | 1                             | 1                   | 3                         |
| 5                              | 4   | 1                             | 1                   | 3                         |
| 6                              | 5   | 1                             | 1                   | 4                         |
