

THIN WALL SYSTEM from **Acoustical**

Key Benefits

- A complete system that reduces normal levels of noise through a wall.
- Made from recycled rubber
- Minimum loss of wall space (Less than 2 inches or 50mm)
- Particularly effective on lightweight and single skin walls.
- Easy and clean to install.
- Complies with PART E building regulations.
- Available from stock

Description

The Thin Wall System is designed to absorb and reduce the amount of airborne noise which penetrates poorly insulated party walls. For loud noise problems our Studio Wall system might be more suitable. We have created this easy to order Thin Wall system for you but all the products can be purchased individually from us.

Supplied with all the following products included;

- M20AD Wall Panels (1m x 1m square and 20mm thick)
- M20 Spray Adhesive (15oz 426 gram cans)
- Acoustic Sealant (380ml tube. 10.5 linear metres approx per tube)
- 2 x layers of Acoustic Plasterboard (12.5mm thick, 2.4m long and 1.2m wide sheets) **MIN ORDER OF 5 SHEETS DUE TO SHIPPING.**

The system is easy to fit with little D.I.Y experience and is simply glued to the existing wall with two layers of Acoustic Plasterboard bonded on top. Once ordered the products are all delivered to your door (Access Permitting) with full step by step install instructions.

Work out the area of your wall then use our product selector below to work out how much you need you can then order online

YOUR WALL AREA IN M2	ACOUSTIC PLASTERBOARD (FIGURE SHOWS 2 LAYERS)	M20 WALL PANEL	ACOUSTIC SEALANT	M20 ADHESIVE
