

BRONZE FLOOR CAVITY SYSTEM

Key Benefits

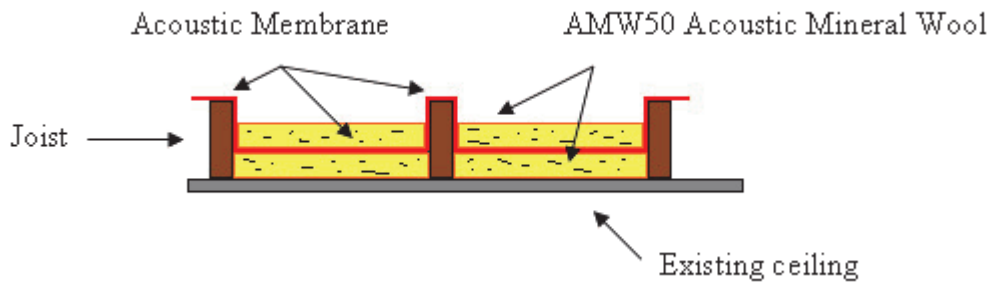

- Means no increase in the floor height
- Offers great thermal and fire insulation as well as sound.
- Produced from natural products.
- Blocks out airborne sound better than lead
- Award winning soundproofing that complies to BSEN ISO 140.
- Available from stock

Description

This Bronze Floor Cavity System is designed to improve the sound insulation of timber suspended floors so is not suitable for concrete floors. It is particularly useful if any increase in the existing floor height is not desired and will help reduce airborne noise from above and below. The system is also a very good prelude to further soundproofing that may be required on top of the floor to enhance the soundproofing properties of the insulated floor. This system **is unlikely** to reduce any footfall or impact sound that is made on the floor.

The main products used are our multi award winning SoundBlocker Membrane and Acoustic Mineral Wool and installed as a sandwich (See Below).

The system is supplied with the following products included;

- A layer of Soundblocker Membrane - (10m x 1.5m and 1.2mm thick) per roll
- 2 x Layers of Acoustic Mineral Wool - (1200mm x 600mm x 50mm thick) per slab

Your area in m ²	Sound-Blocker Membrane	Acoustic Mineral Wool (50mm thick. Enough for two layers)
1	1	3
2	1	6
3	1	9
4	1	12
5	1	14
6	1	17
7	1	20
8	1	23
9	1	25
10	1	28

If you have experience of lifting floorboards then the system will be easy to fit otherwise a local handyman or second fix carpenter could undertake the work.

Once ordered the products are despatched with full step by step install instructions.

Work out the area of your floor then use our product selector, left, to work out how much you need.
